

# Cost Savings: clean2go<sup>+</sup>

We've calculated that if you're currently using a sanitizer hand pump it will take **less than 6 months** to cover the cost of the Clean2Go+. This is based on **100 people per day** using the pump at **5ml per dose** after that you will make ongoing savings from the reduced use of sanitizer that the clean2go+ uses.

## Assumptions:

- Average cost of **500ml** sanitizer hand pump = **£6**
- Average cost of soap **500ml** hand pump = **£4**
- **5ml** of hand sanitizer or soap is used per person.

## More than 100 people per day?

- We've calculated that if **200 people** use the Clean2Go+ per day the payback time will be **less than 3 months** when compared with a hand sanitizer pump, for soap this is **less than 5 months**.
- When taking account of **500 people per day** the payback time decreases to **just over 1 month** for sanitizer hand pump and **less than 2 months** for soap.
